	Screening Registry through web based or tablet application base reporting. The QR code shall be tagged to the infant's data. The web based encoding is done by the screener in the hearing screening facility who enters data in the NHSRC website www.newbornhearingscreening.com.ph through a computer with internet access while the tablet application based reporting is an application installed by the NHSRC to the tablet of the hearing screening facility. The QR code must be readable by any smartphone, tablet, computer webcam, or computer camera for tagging and encoding. The Second copy (yellow) is retained by the hearing screening center while the third (blue) copy is attached to the Philhealth Claim. The yellow and the blue copies, being duplicate copies shall not contain security features nor QR code. However, the yellow and blue copies also contain the unique serial alphanumeric registry card number same as that found on the white original copy.				

Note: Pls. fill-up all applicable columns.
